Bonus tips

The screenshot shows the FME Workbench 2021.0 interface. The title bar reads "FME_kommuner_download.fmw - XLSX to SHAPEFILE - FME Workbench 2021.0". The top toolbar includes icons for File, Edit, View, and other functions. The left sidebar shows a project tree with folders like "Layers/zeilen (XLSX)", "OUTPUT_FMEdownload&S...", "Transformers (12)", "Upgradable Transformer...", "Bookmarks (3)", "User Parameters (2)", "FME Server Parameters", "Web Connections", "Workspace Resources", "Workspace Parameters", "Name: XLSX to SHAP...", "Password: -not set-", "Description", "Translation", "Logging", "Reader/Writer Redirect", "Scripting", and "Workspace Search...". The "Transformer Gallery" at the bottom left shows "All (480)", "Categorized", "Embedded Transformers (1)", "FME Hub", "Recent (10)", and "Search Results". The main workspace displays a workflow with three transformers: "XLS Reader", "XLS Platform", and "Attribute Exposure". The "XLS Platform" transformer is highlighted with a callout box containing the following details:

- XLS Platform (XLS.Platform)**
- XLS Source:**
 - XLS Source Type: Attribute with XLS Document
 - XLS Attribute: _response_body
- Filter Paths:**
 - Elements to Match: link.html
- Customize Attributes:**
 - Elements as XLS: Programs -not set-
- Expose Attributes:**
 - Attributes to Expose: -not set-

The "Attribute Exposure" transformer is also highlighted with a callout box:

- Attribute Exposure (Attribute.Exposure)**
- Attributes To Expose:**
 - link.html
 - updated

The workflow shows data flowing from the "XLS Reader" to the "XLS Platform" transformer, which then feeds into the "Attribute Exposure" transformer. The "Attribute Exposure" transformer's output is connected to a final destination.
